

A NEW BRITISH INVENTION THAT USES THE POWER OF MAGNETS TO INCREASE THE FUEL EFFICIENCY IN HOUSEHOLD BOILERS BY UP TO 15%

Today, Magnatech Technology Ltd, a British start-up based in Haverhill just outside Cambridge, has announced new results showing that fitting their device to existing copper or steel pipe boilers - of the type used in 80% of family homes can, quite remarkably reduce fuel usage by up to 15%.

Magnatech have just signed a deal with major housing provider The Guinness Partnership, building on existing contracts with K & T Heating and Sureserve Maintenance.

The technology works by conditioning fuel (gas or oil), separating clustered fuel molecules and reorienting them for a short time so they burn more

efficiently, this produces a hotter flame with less unwanted CO and NOx emissions and a more complete combustion process.

Because of the savings made, the product, which costs just £145 will repay its cost to a typical household in just a few months, and the product will continue to make these savings for life.

Speaking about this new invention, Magnatech founder and CEO Simon Goodchild said:

"I'm so excited to see these real-world results showing Magnatech can reduce a family's fuel bill by almost a tenth. In this cost of living crisis this is just the sort of good news we need - and it helps save the planet too. I'm so proud of this ground-breaking technology, and delighted to see major housing providers buying in bulk to save their residents money. It takes just 10 minutes to install - once you've got one there's no looking back."

Proven to

save

up to 15%

on your energy bills

FOR LIFE!

The Guinness Partnership supports the installation of a Boostaboiler system from Magnatech Technology Limited.

From our findings when a Boostaboiler is installed in our customers' homes it reduced the fuel consumption of the boilers by **at least 8%**. We understand this will carry on for life.

This lowered the homes energy costs and also reduced carbon emissions through less gas being used.

Mark Moore (Head of Heating and Hot Water Services)

We, at Sure Maintenance, are extremely proud to be working with Magnatech Technology Ltd and installing their BoosterBoiler system in our clients homes.

It's a great product, completely Fit & Forget with no moving parts and no requirement for external power of any kind.

It's a perfect solution in this time of ever increasing gas and oil prices.

Pat Coleman (Managing Director)
